PROJECT NAME: Truber

GROUP MEMBERS: Onur Ölmez, Alper Caymaz, Emre Şimşek, Murat Vermez, Eren Çivril

Questions to identify measurements:
How much space required to contain application?

Identified measurements:
The amount of space that the app needs.

Measurement storage and collection:
Choose the method and time for feature collection.

Questions to identify measurements:
How much time needs for developing the application and other components?

Identified measurements:
The number of hours put into developing the app and the project's other components.

Measurement storage and collection:
Calculating how much time needs for each feature to develop.

SE 216 – SOFTWARE PROJECT MANAGEMENT
SOFTWARE MEASUREMENTS DOCUMENT

Measurement Type	Description	Example Measurements
Required storage need	The amount of space that the app needs.	1GB
Time spent	The number of hours put into developing the app and the project's other components.	3 weeks of 5 people team, 5 days of each week and at least 8 hours for each day. Totally, 120 hours required
Required Training	How long it takes the typical user to become familiar with the app	15 minutes
Income	The profit of commission fees	It depends on the number of the jobs and its size
Setup time	The total time to configure server and installation of the application	2 hours
Launching time	The time required to launch the application	400miliseconds
Testing	The time required to test the applications functionality	30 hours
